PROJECT STRUCTURE

Date	15 November 2022
Team ID	PNT2022TMID43798
Project Name	Crude Oil Price Prediction

A Flask Application is built which renders HTML pages stored in the templates folder and a python script "app.py" is used for server-side scripting.

- ➢ app.py - contains the actual python code that will import the app and start the development server.
- ➢ IBM.ipynb - This is where the defined model for the application is present.
- ➢ Crude_oil.h5 - This is the model weights file that will be generated when the model is saved.
- ➢ static - contains static files i.e., CSS, JavaScript, images.
- ➢ templates - This is where HTML templates i.e., file1.html, file2.html requirements.txt are stored.
